TRAIN TRANSPORT

Due to the integration of all locations, the majority of the transported containers are delivered or picked up by own vehicles. This guarantees a consistently high quality of the transport chain.

The ‚Multimodal Transport‘ department handles national and international transports, mainly by rail or waterway. It optimizes the transport chains from/to Nordhäfen and Westhäfen.

Our customers appreciate the advantage of having only one contact in this transport segment.

Since 2005, our customers have been relying on the experience and quality standards of the ‚Multimodal Transport‘ department at EKB Container Logistik.

LOCAL AND FEEDER TRANSPORT AND LONG-DISTANCE TRANSPORT

Our service portfolio in local and long-distance transport includes the following components:

- All chassis types (tilt chassis, light chassis, etc.) available
- Transportation of temperature-controlled, oversized, overheight and dangerous goods
- Short term bookings
- Transport optimization to avoid empty runs
- ‚One-way‘ prices
- Creation of transit documents
- All vehicles are equipped with smartphones and on-board computers for fast information exchange
- Track & Trace of the transport
- Transport-related temporary storage on our own secured premises
- 24/7 availability through operation of an efficient shift system
- Europe-wide transport of tank containers (long-distance transport)
- Unhitching of the chassis at the consignor / consignee and pick-up at a later date (feeder transport)

BENELUX

All international long-distance transports to and from Rotterdam, Antwerp and Zeebrugge are centrally planned and organized by our Rotterdam branch.

- Transport type: truck or combination rail and truck
- All types of chassis available
- Transportation of temperature-controlled, oversized, overheight and dangerous goods
- Europe-wide transport of tank containers
- Short term bookings
- Transport optimization to avoid empty runs
- One-way prices
- Creation of transit documents
- Real-time tracking of the transport
- All vehicles are equipped with cell phones and on-board computers for fast information exchange.

POLAND

- Cross-border transports from Malaszewicze to Western Europe and the neighboring Baltic States
- Transports to Belarus and Ukraine
- Round trips between Poland and EU countries
- Imports from Hamburg to Poland
- Leasing of 2 container chassis to subcontractors
- Mediation of multimodal transports from Poland to China

MULTIMODAL TRANSPORTS

Since 2005, our customers have been relying on the experience and quality standards of the 'Multimodal Transport' department at EKB Container Logistik. The Multimodal Transport Department handles national and international transports, mainly by rail or water. The Multimodal Transport department optimizes the transport chains not only to Nordhäfen and Westhäfen, but also to the Südhäfen. By integrating all locations of EKB Container Logistik, the majority of the transported containers are delivered or picked up by EKB Container Logistik's own vehicles. This guarantees a consistently high quality of the transport chain.

- Combination of rail, barge and truck
- Within the scope of the legal possibilities an additional 4 t of goods weight can be transported
- Short-term rebooking on direct truck possible
- Unhitching of the chassis at the consignor/consignee and pick-up at a later time
- Just in time delivery
- Transport of ADR and waste transports requiring approval
- All chassis types available

WASTE TRANSPORT

With 200 vehicles, EKB Container Logistik has the largest European fleet of semi-trailer units equipped with unrestricted waste transport permits. This allows us to quickly and efficiently carry out any type of waste transport requiring a permit - in containers. Through close and well-rehearsed cooperation with shipping companies and forwarding agents, EKB Container Logistik is able to transport waste requiring a permit to and from any location in the Federal Republic of Germany and the Netherlands within 24 hours. Our logistics specialists were able to shorten the long valid time frame for the transport of waste shipments requiring a permit by a whole 48 hours.

TRANSPORT OF DANGEROUS GOODS

We routinely transport loads declared as dangerous goods.

- ADR equipment of the vehicle fleet
- Comprehensive dangerous goods training for driving personnel and dispatchers
- This also applies to Ex II-protected transports. The organization and execution of these transports is part of our daily business. The transport of over-high and over-wide containers is also part of our portfolio.

CLIMATE CHANGE - WHAT DO WE DO?

As EKB, we have always been known as the „Greens“, which of course derives from the colors of our corporate logo. Social change and the commitment behind it in recent years have brought climate change and the natural limits of our earth's resources clearly to the front and into the public consciousness. As part of the logistics chain, we are also a source of emissions that influence climate change and all its consequences.

Consequently, we as a group of companies have thought about how we can reduce or neutralize our emissions in order to make our business model emission-free in the medium term. The basis for this consideration is the centrally compiled and maintained Co2 balance sheet of the group of companies, through which we are now in a position to evaluate our emissions and measure their development in the long term.

True to the motto „always clean your own house first“, we have started to compile a set of measures to successively reduce the original emissions caused by our business activities after the central CO2 balance has been drawn up.

The main points arise from the following three topics:

- Consistent conversion of fleet units to alternative drive technologies (LNG and bio-LNG, etc.);
- Consistent conversion of the company car fleet to electric and hybrid vehicles for all new orders;
- Purchase of electrical energy for all properties from purely renewable energy sources.

Despite considerable investments - primarily in alternative drive technologies - it is not possible to map our business model entirely without emissions. In cooperation with Klimainvest Green Concepts GmbH, we have started to decarbonize our remaining emissions and make them climate neutral. The CO2 emissions are compensated by the project portfolio of Klimainvest Green Concepts GmbH. The supported projects are officially registered, follow the regulations of the Kyoto Protocol and are additionally certified according to the strict requirements of the independent and non-profit Verified Carbon Standard (VCS). In addition, we now also offer all customers the option of obtaining their transport services booked with us in a climate-neutral manner via this route.

EKB DIGITAL SOLUTIONS

We provide connections.

IT SERVICES

We began early on to drive forward networking with our customers and suppliers with our own in-house IT experts and have now achieved a high degree of integration.

We have now bundled the know-how we have built up over the years into one company and are now also offering our expertise to external partners via EKB Digital Solutions GmbH. Benefit from our employees' years of experience in

process analysis and implementation as well as the transformation of analog to digital business processes.

The bundled development competence allows us to work out the right IT solution for your individual application at short notice and to implement it through independent programming. In detail, our range of services includes the following focal points:

Consulting services

- Analysis of analog processes and concept development for the transformation into a digital process
- Analysis of legacy systems
 - As-is analysis
 - Migration concept

Technologies

- Distributed / scalable microservices based on Spring-Boot
- Modern web applications based on Angular Material
- Database connections
 - Document-based non-SQL databases (MongoDB)
 - Classic relational databases (MySQL)
- Loose coupling via queues (RabbitMQ)

API connection to external platforms

- Vehicle data and Digitacho (Yellowfox)
- Invoice dispatch (Tradeshift)
- Track & Trace (Tradelens, Fourkites)
- Ticket systems (Jira)
- Provision of mileage calculation according to EWS

Interfaces

- EDI connections based on XML data
 - Transport request
 - Status messages
 - Track & Trace
- Excel import of order data
